BIO-Based pESTicides  
production for sustainable agriculture

## Pythium Oligandrum strain I-5180 growth and scale-up

**Greencell**, a leader in microbial ecology applied to agroecology, with expertise in the production of biosolutions, is building a clean room and a sterile chamber dedicated to the large-scale production of the new biopesticide based on *Pythium Oligandrum* strain I-5180.

The construction is ongoing and the production process is in the final stage of validation. The estimation of the quantity of excellent quality of oospores in the final product is now possible with state-of-the-art technology, namely flow cytometry. Several production batches have been used for field trials and in planta under controlled conditions.
