

BIG NEWS

Frass Delivery

Last year, the construction of the world's largest vertical farm, Ÿnfarm, was completed. Since December 2023, **the first deliveries of Frass, an insect-based fertilizer, have been regularly taking place on site.** This is a significant milestone for the FarmYng project. **Very soon, proteins derived from the processing of larvae will also be produced and delivered from the site.** More than ever, we are nearing our goal: addressing the food and climate crises by providing high-quality products for both animals and plants. **Thank you and congratulations to all FarmYng partners!**

AAFCO Authorization for Protein70 in the USA

As, Ÿnfarm is currently starting production, Ÿnsect announces a historic milestone: after 2-year authorization, Ÿnsect **secured the first-ever authorization from the Association of American Feed Control Officials (AAFCO) for the commercialization of defatted mealworm proteins for dog nutrition in the United-States.** **This authorization is a game-changer and opens new opportunities in the thriving American pet food market.**

Governance Change at B4C

A new president for B4C! **At the beginning of 2024, Michel Mangion was elected as the new president, with a program focused on three pillars: transition, sustainability, and reindustrialization.** For the next three years, he aims to continue the ongoing initiatives while **strengthening B4C's expertise** and impact on sustainability issues, thereby **establishing the group as a key player** in the transition towards a greener and more responsible economy.

EVENTS

1 Ÿnsect was at SIVAL, the largest French plant production trade show in Angers, from January 16th to 18th, **introducing its fertilizer and its benefits for large-scale agriculture** to industry professionals.

2 COMPO invited Ÿnsect to join at the JdC Garden Trends trade fair which took place in late March in Marseilles, South of France. This fair is essential for showcasing new products to customers, gearing up for **the 2025 gardening season.** **Our two partners presented ŸnFrass and the innovative process behind it.** The Ÿnsect team brought a small mobile farm featuring the famous Tenebrio beetle at various stages of development. **Retailers were thrilled** and asked numerous questions during the three-day event. **Given that frass-based fertilizer is a new material in hobby gardening, it was crucial to explain its origins.** **Customers could easily realize that this raw material is truly odorless and 100% natural.** Job's done!

The Farmyng project was showcased among collaborative initiatives by the Circular Biobased Europe Joint Undertaking (CBE JU) at BIOKET last March. BIOKET, hosted by the Bioeconomy for Change competitiveness cluster, stands as the premier annual international conference dedicated to key technologies and innovations applied to biomass valorization across various sectors of the bioeconomy. This edition attracted over 500 participants, highlighting the growing interest and engagement in advancing sustainable solutions!
